SUMMARY

Full-stack engineer with 5+ years across mobile, backend, and applied AI. Joined a 20-person Y Combinator (S21)-backed startup as an early engineer and ended up owning two products end-to-end: the Flutter application and a generative-AI chat system taken from zero to 20+ live customer organizations. Carried both through an acquisition into a much larger engineering organization, picking up a new language and a multi-service codebase to keep them shipping.

EXPERIENCE

NICHE (FORMERLY GOODKIND)

Toronto, ON / Remote

Software Engineer, Full-Stack & AI Engineer

2025-2026

- Carried the AI chat product and mobile application through the acquisition into Niche's larger, multi-service codebase, integrating into new team standards and review processes.
- Learned to contribute to a bigger team with predominantly Go lang backend, delivering a personalized product to 2,000 client institutions.
- Instrumented LLM pipelines with Langfuse for tracing, evaluation, and cost / latency visibility; monitored service health in Grafana; orchestrated scheduled data workflows in Airflow.
- Expanded from backend into full-stack ownership of the chat frontend, broadening scope to additional products while continuing to own the chat system and mobile application across a wide range of unfamiliar repositories.

Mobile Engineer, AI Engineer

2022-2025

- Joined as an early engineer at a 20-person Y Combinator (S21)-backed startup, working daily with the CEO, CTO, and COO on product direction and system design.
- Owned the Flutter mobile application end-to-end — architecture, features, releases, and App Store / Play Store distribution.
- Built the company's AI chat product from zero to production in Node.js and TypeScript, including a full RAG system (document ingestion, embeddings, Pinecone vector retrieval, and multi-step LLM tool-use chains) and asynchronous background processing with BullMQ / Redis to index millions of vector embeddings.
- Grew the chat system from internal demo to 20+ live customer organizations handling roughly 1,500 messages per week.
- Led a team of two interns through a summer term, scoping their work and reviewing their code.

ASPIRE PERSPIRE NOURISH LODGING & CONCIERGE

Remote

Freelance Flutter Developer

2021-2022

- Freelance sole developer of a production mobile app for short-term rental clients — designed the UI / UX and branding, integrated a NoSQL database and third-party APIs, and shipped internationally to iOS and Android, cutting check-in time 35%, check-out time 20%, and administrative task time by over 52%.

SHOPPERS DRUG MART

Toronto, Ontario

Retail Merchandiser

2017-2021

- Four years in a fast-paced pharmacy / retail environment, while attending high school, then college.

EDUCATION

HUMBER COLLEGE, Toronto, Ontario

Computer Programming Diploma, Computer Programming, 2020

TECHNICAL SKILLS

Node.js, TypeScript, Go, Pinecone, MongoDB, Airflow, Grafana, BullMQ, Redis, Flutter, MySQL, PHP, WordPress, C#, ASP.NET, Langfuse, Google Drive, NoSQL
